New line-up by Osborn and Dronco

## **Accessories for Cordless Power Tools save up to 30% battery life**

**(Burgwald/Wunsiedel). Osborn und Dronco introduce specially developed accessories for cordless power tools triggered by the big demand from building and construction businesses, plumbers, HVAC, janitor services and mobile emergency units.**

**The assortment consists of cutting- and grinding discs, abrasive fleece, brushes, polishing and satinizing tools. All to be used on cordless power tools. By using the products, the battery can last up to 30% longer than with ordinary tools. By this also the number of battery charging cycles can be reduced, which helps to increase the overall life time of the battery.**

The European Power Tool Association (EPTA) estimates on its website ([www.epta.eu](http://www.epta.eu)) that the cordless power tools are the quickest growing market segment within power tools and a continuation of this trend is expected. Own studies by Osborn and Dronco at manufacturers of cordless power tools show that markets with very high industry standards are already equipped with battery driven tools with a rate of 50%. Also the battery life and the rounds per minute on the tools grow quickly. Soon rpms will be reached similar to those of usual power tools. Especially this fact will create special requirements for the accessories being used with these tools.

Osborn and Dronco conducted intense tests in order to meet these requirements. The results being that the accessories need to be lightweight and still offer precise, safe and quick handling. Another demand is versatility. With only one accessory several different applications should be served. For example:

.../2

-2-

A cutting disc should be able to also perform light grinding or a brush should not only degrain wood, but should also strip paint from a metal workpiece.

These and further applications can be processed with the new line-up from Osborn and Dronco.
